

INIM CLOUD. CONTROL CONNECTED TO THE FUTURE.

Inim Cloud is a space on the web that can be used for remote control of your Inim systems, no matter where you are. Using a browser or AlienMobile app you can manage control panels, events and scenarios of intrusion detection and home-automation systems. As an installer, you will find many advantages for your company. You will have at hand a customer administration system that allows you to manage your contacts, view instantly the status of installations and set reminders for scheduled maintenance. Offer prompt and efficient assistance that translates into customer satisfaction.

Technical features

As a result of its infrastructure the Inim Cloud offers potentially unlimited resources:

- computing power, data storage, broadband;
- one of Europe's largest data centres with TIER 3 and TIA-942 standards;
- redundant servers and multiple connections for power supply and cooling;
- UPS, generators and floating floor;
- scheduled maintenance with no service interruption;
- storage & network redundancy to replicate the Cloud in another geographic area in the event of disasters or natural calamities;
- encrypted communication between control panels, peripherals and internet servers.

Account Registration

All that is required to register to the Inim Cloud is an Inim control panel equipped with an Internet connection interface.

1. Sign up to inimcloud.com
2. Create your account and receive a unique code (installer ID).
3. Use the code to register the control panels you want to connect to the Cloud.
4. Enter the code at a system keypad.
5. The control panel will connect to the Cloud.
6. Manage the system functions.

Remote control of intrusion detection
and home-automation systems

ADVANTAGES FOR THE INSTALLER

Installation management

Instant access plug&play, without network configurations or router programming.

Visualization of system status

System status verification for fault and anomaly checks and schedule maintenance work.

View Events log

View in real-time tamper, fault and other events saved to the log.

Control panel programming

Program Inim control panels via the Cloud for convenient centralized management.

Backup

Save programming solutions or full database backups of the configuration software to the Cloud.

Push notifications on smartphones

Push notifications on mobile devices via the installer app (coming soon), with the enable/disable option.

ALL IN ONE

INIM CLOUD

Instant access

Instant access to the Inim Cloud with registration to inimcloud.com, for owners of Inim anti-intrusion and building-automation systems.

Remote control

Remote control of the intrusion detection and home-automation system of home, office or workplace. All from mobile devices via AlienMobile app or PC.

Anti-intrusion control

Real-time monitoring of protected environments, using intrusion surveillance with the possibility to implement activations and arming operations.

Home-automation control

Possibility to activate/deactivate and set up air-conditioning equipment, lights, garden sprinklers, blinds, gates and chronothermostats.

Notifications via app or email

Alarms and system faults notified via email or AlienMobile+ app, for requested installer intervention.

Interface

Simple and intuitive web interface with full and instant functions. Security under control and home automation at your fingertips.

ADVANTAGES FOR THE USER
